

Autonomous Driving Project – Team Task Division

#	Task	Short Summary	Ali Abdelkhalek	Mohamed Awis	Yassin Elhalawany
1	Git & Project Setup	Create Git repo and organize project	Created the Task devision File	Created the Git repo	Organized the files for the first meeting
2	System Engineering	Develop SysML diagrams and requirements	Create Requirements diagaram	Create Use case diagaram, Activity diagram and Package diagram	Create Sequence diagaram and state machine diagram
3	Prototype Simulation	Develop first Tinkercad prototype			
4	Obstacle Detection	Detect and avoid obstacles			
5	Line Detection	Vehicle follows lane autonomously			
6	Speed Optimization	Improve vehicle performance			
7	Routing Functions	Oval and figure-eight routing			
8	Parking Function	Autonomous parking capability			
9	Milestone 1	Vehicle follows lane successfully			
10	Milestone 2	Vehicle detects obstacles successfully
